February 2011

Index

A list of satellite instruments is given in Appendix A.
A full list of abbreviations and acronyms is given in Appendix C.
A list of chemical names and molecular formulae is given on page xxxi.

A
AATSR
  aerosol retrieval algorithm, 263–266
  cloud brightness measurements, 235
  data products, 264, 279
  retrieval of aerosol properties, 269, 279–282
Absorption linewidth, 36–37
Absorption of radiation, 26, 29, 40, 42, 51
ACCENT, 10
ACE, CO seasonal measurements, 136–138
ACE-FTS, mission example, 135–137
Acetone (CH_3COCH_3), tropospheric studies, 391
Acetylene (C_2H_2), tropospheric studies, 391
Acid deposition, 19, 21–22
Acid rain, 21
Active microwave techniques, introduction, 195
Active systems perspectives, 507
ADEOS, 9
Aerosol
  air quality role, 261
  climate role, 261
  data assimilation example, 478–480
  model comparison, 455, 460–467
  optical parameters, 266–269
  over land
    MODIS, 284
    POLDER, 278–279
    retrieval, flow chart, 286
  over ocean
    MODIS, 283–284
    POLDER, 277–278
    retrieval, flow chart, 285
  scattering from, 42, 48
  validation needs, 343–344
Aerosol-cloud interactions, use of satellites, 301–303
Aerosol direct radiative forcing
  global averages, 298
  global maps, 298
  model comparison, 300–301
  uncertainties, 299–301
Aerosol optical depth (AOD)
  AATSR compared with AERONET, 282
  comparison of ozone monitoring instrument OMI and OMAERO, 303
  estimated uncertainty, 344
  Eyjafjallajoekull, 499
  global from MODIS, 284, 287
  to estimate PM2.5, 294
Aerosol parameters, 498–500
Aerosol products, intercomparison, 304
Aerosol properties
  current instrumentation, 264
  databases, 269–270
  description, 260
  from MERIS, 289–291
  from OMI, 284–289
  history of observations, 261
  instruments for retrieval, 270–271
  lidar, impact of, 262
  multi-wavelength algorithm, 287–288
  operational prediction, 417
  retrieval algorithms, 262, 264–266, 270, 272, 275, 278, 280–281, 283, 305
  validation, 292
Africa
  biomass burning, HCHO, 378–379
  CALIOP observations, 273
  CH_4 enhancement, 385
Air mass factor (AMF)
  2-D and 3-D box, 97–98
  box, 92–97
  total, 91–92

Air pollution, 3, 11, 17–20, 25
  impact, model evaluation, 455
Air quality, 2, 14, 19–20, 60
  importance of NO_x, 368
  monitoring with satellites, 417
Airborne platforms
  measurements for validation, 349
AIRS, 9, 518
  CO_2 transport, 142–143
Alaska, forest fires, 376, 380
Albedo
  Earth's surface, 72, 85, 89, 91, 93–94, 96, 98, 99, 105, 106, 109, 111
  white & black sky, 89
Algorithm development prospects, 502–503
Ammonia. *See* NH_3
AMSR-E, 213
AMSU-A, 167, 176, 178–181, 183–185, 206, 213
AMSU-B, 167, 173, 176, 178, 181, 184, 185, 213
Annual variability, O_3, 367
Antarctica, IO measurements, 388
Anthropocene, 16, 18, 493, 512
Arctic
  BrO spatial extent, 387
  forest fires, 376
Asian pollution event, CO tracer, 405
AT2, 10
ATM model, brightness temperatures, 168, 169
Atmosphere
  physical structure, 11–13
  pressure variation with altitude, 11, 12
  temperature variation with altitude, 11, 12
Atmospheric circulation, monitoring with tracers, 404
Atmospheric composition
  long term observations, 24
  regional and episodic studies, 25
  role of measurements, 24
Atmospheric profiles
  H_2O vapour, 164–166
  temperature, 164–166
Atmospheric radiative transfer, 42, 46–49
Averaging kernels, derived from AMF, 95–97

B

Bayesian techniques, 161, 162, 173, 202
Beer-Lambert law, 40, 49, 73–76, 84, 92
Best Linear Unbiased Estimate (BLUE), 473–474
Biomass burning, 14, 19–21, 45, 495–497, 504
  CO measurements, 371, 374, 376, 412
  glyoxal observations, 379–380
  HCHO detection, 378–379
  NO_x, 368
Bouguer-Lambert law, 40
BAER
  aerosol retrieval, 289
  flow chart, 285, 286
Brightness temperatures
  observations, 170
  simulation, 169
BrO
  estimated uncertainty, 318
  from volcanoes, 382, 387
  global map, 399, 403
  in polar regions, 387, 410
  in volcanic emissions, 386
  mechanism of release, 387, 410
  tropospheric studies, 396
Bromine monoxide. *See* BrO

C

Calibration
  definition, 319
CALIPSO
  aerosol cloud interactions, 263, 264, 301–303, 305
  aerosol retrieval, 264
  cirrus cloud heights, 252
  cloud retrieval, 265
  instrument payload, 275
CALIOP
  cloud height determination, 252
  data calibration, 273–274
  data products, 274–275, 277
  extinction retrieval procedure, 275–276
  west-central Africa, 273
Carbon dioxide. *See* CO_2
Carbon monoxide. *See* CO
CarbonTracker system, 475
Cell correlation radiometry, 127
Central Asia, forest fires, 376
CFC, 17, 22–24, 27
  fate in the troposphere, 17, 23
CFC-11, 12, 113, tropospheric studies, 398
CH_4
  estimated uncertainty, 317
  global map, 402
  inverse modelling, 471–472
  regional enhancements, 385
  tropospheric studies, 394
Chemical weather, 417
Chemical weather satellites, 512

China
CH_4 enhancement, 385
CO measurements, 372, 374
NH_3 concentrations, 382
NO_2 monthly averages, 369
Chlorofluorocarbons. *See* CFC
Climate change, 2, 3, 18–20, 22, 23, 47
aerosol direct radiative forcing, 297–301
operational monitoring, 416
Climate change gases, 495–496
Cloud cover, 232–234
Cloud droplets
effective radius, 232, 238–243
Cloud ice
Aura observations, 190
H_2O content, definition, 168
H_2O retrieval, 172–174
Cloud liquid water
definition, 168
retrieval, 170–172
Cloud parameters, 498–500, 503, 504, 507
needed accuracy for validation, 342
Cloud phase, 235–237, 246, 249, 253
Cloud products, 232, 237, 244
validation, 247–249
Cloud profiling
MODIS and CloudSat 196–197
radar (CPR), 197–198
Cloud remote sensing
hyperspectral remote sensing, 249–251
lidar remote sensing, 251–252
modern trends, 232, 249–253
Cloud screening, aerosol retrieval, 265
Cloud slicing, 102, 104
Cloud top height
CO_2 slicing techniques, 245
stereoscopic method, 245
thermal IR measurements, 247
validation, 232, 249
Clouds
aerosol interactions, 263, 264, 301–303, 305
brightness temperature, 235
effect on Box AMF, 92–95
future missions, 252–253
ice path, 243–244
liquid water path, 243–244, 249, 253
microwave remote sensing, 167–170
observational history, 251
optical thickness, 231, 233, 237–240, 244, 246, 249, 250, 253
parameters, 232–247, 253, 254
reflection function, 238, 240, 241, 244, 246
CloudSat
intersection with MODIS, 199
mission, 196–197
radar, 196
CO
ACE seasonal measurements, 136–138
biomass burning, 371, 402
boundary layer residual, 415
emission estimates, 375
emissions, anthropogenic, 471–472
estimated uncertainty, 317
global emission estimates, 375
global map, 400
global measurements, 372
hemispheric transport, 374
in situ validation measurements, 317
inverse modelling, 471–472
long-range transport, 373, 374, 405
microwave observations, 191
model comparison, 471–472
model comparison for MOPITT, 464–465
model performance, 377–378
MOPITT global distribution, 141–142
SCIAMACHY/MOPITT comparison, 327, 338, 339
SCIAMACHY/OMI comparison, 337
seasonal variation, 373
transport phenomena, 373–374
tropospheric studies, 393
upper troposphere, Aura, 191–193
validation strategy, 357
CO_2
AIRS transport, 142–143
estimated uncertainty, 318
fate in the troposphere, 16
global, 384
global map, 402
ocean and atmosphere, 16–17
periodic pattern, 410
tropospheric columns, 384
tropospheric studies, 394
Coherent radiation, 30, 44
Column density maps, proxy for emissions, 399–404
CEOS, 494
Cryosphere, 14, 16

D

Data analysis, UV/vis/NIR
desirable improvements, 73, 75, 113

Data assimilation
4d-var, 471–472, 474, 478–480
aerosol, 478
BLUE, 473–474
GPS results for Mediterranean, 210–211
in operational meteorology, 176–184
Kalman filter, 474
microwave radiative transfer in, 179–181
NO_2 example, 474, 478
O_3 example, 475
objectives & approaches, 473–475
Data centres
for validation, 354
Data comparison
data analysis, 320, 325–328
finding collocated data, 320–321
horizontal representaion, 323–324
selection and filtering, 320–322
time differences, 323
vertical representaion, 322–323
Data quality and validation. *See* validation
Databases, spectroscopic
